

Workflow figure layout preview

Anonymous Author(s)
Submission Id: Layout preview only

Abstract

This technical preview checks a workflow diagram in the unchanged AAMAS 2027 class. It contains no experimental results and is not a conference submission.

Keywords

Workflow layout, figure preflight

ACM Reference Format:

Anonymous Author(s). 2027. Workflow figure layout preview. In *Proc. of the 26th International Conference on Autonomous Agents and Multiagent Systems (AAMAS 2027), Hanoi, Vietnam, 3–7 May 2027*, IFAAMAS, 2 pages.

1 Layout check

The next page uses a full-width figure at native size, without scaling the text. The scientific paper will identify all task counts, model settings and outcome rules in its methods. This preview does not replace the final scientific or visual review of that paper.

Same supplied task and context; no benchmark-test feedback during generation**SCC: author controller, two coder iterations at most**

Figure 1: Generation workflows and their evaluation boundary. D, SN, SR, MN and MR are the five factorial conditions. In a separate contemporaneous study, SCC is compared with fresh SN and SR using the same model. SCC’s generated tests are not the hidden benchmark tests. The diagram shows ordinary completion paths; transport aborts and author-code extraction fallbacks are handled separately. An exception-free internal run does not establish benchmark correctness. The configured SCC controller does not retest a repaired program internally.
